

**LB1840M**

Low-voltage/Low-saturation Bidirectional Variable Constant-voltage Motor Driver

Overview

The LB1840M is a low-voltage, low-saturation, three-input type two-channel bidirectional motor driver that permits switching between constant-voltage regulated output and saturated output. The design is ideal for a two-phase bipolar driver for stepping motors.

Features

- Wide operating voltage range (3.0 to 9.0 V).
- Low saturation voltage
 $V_{O(sat)} = 0.40 \text{ V}$ at $I_O = 200 \text{ mA}$.
- Consumes almost no current in standby mode (0.1 μA or less).
- Permits setting of bidirectional constant-voltage regulated value.
- Three-input type that is ideal for a two-phase bipolar driver.
- Permits switching between constant-voltage regulated output and saturated output.
- Built in reference voltage coupled to input.
- Compact MFP-14S package.

Truth Table

Input			Output		Mode
ENA	IN 1/2	VM	OUT 1/3	OUT 2/4	
L	—	—	OFF	OFF	Standby
H	L	H	H	L	Constant-voltage regulated forward operation
H	L	L	H	L	Saturated forward operation
H	H	H	L	H	Constant-voltage regulated reverse operation
H	H	L	L	H	Saturated reverse operation

The constant-voltage regulated output V_O (= voltage between H side output and GND) is controlled by $V_O = 2.5 \times V_C$. The output is in the saturated state when the V_C input range is 0.2 to 6 V and $V_O \geq V_{CC}$.

Pin Functions
